

## "Failed to connect to database"

Posted by karrez - 2010/03/25 12:38

---

i recieved this message when i tried to open my watershed geodatabase. i have gotten this message before when i tried to open Arc9.3-created geodatabases with my Arc9.2 computer, but i created this most recent geodatabase on the 9.2 machine and it still won't open it in either the "add data" window or from ArcCatalog. i get the same message from both attempts. I am able to access the geodatabase from the AGWA toolbar (i can still parameterize or write precip, etc) so thats good. just wanted to let you know shea and see if you had any idea...
